Project Overview:

This project presents a comprehensive sales analytics dashboard for a chocolate manufacturing company. The dashboard visualizes key sales metrics across multiple dimensions—time, geography, and sales personnel—to support data-driven decision-making.

Tools Used

- Database from (Kaggle)
- Data visualization tool (Microsoft Power BI)
- Data aggregation and cleaning (Microsoft Excel, Python Programming Language)

Key Features & Insights:

1. Monthly Sales Trend

- Tracks **Sum of Amount** from January to August.
- Sales peak in **January (900K)** and gradually decline toward **August (740K)**.
- Highlights seasonality and potential end-of-year slowdown.

2. Sales by Country

- Compares sales performance across **Australia, UK, India, USA, Canada, and New Zealand**
- **Australia leads** with (1.14M), followed closely by the UK (1.05M).
- Useful for regional strategy and market prioritization.

3. Sales by Sales Person

- Ranks individual performance, from **Chess Bonneil (321K)** down to **Wilone (139K)**.
- Enables identification of top performers and those needing support or training.

Business Value

- Provides clear visibility into **monthly revenue patterns**
- Supports **geographic expansion decisions**
- Facilitates **sales team performance reviews** and incentive planning
- Helps identify **seasonal trends** for inventory and marketing alignment
